Final Project Summary: Personal Website

For my final project, I created a personal website/portfolio for my software engineering/CS work. The website has 4 sections: Home, About, Projects, and Contact; compiling a short introduction about me, my hobbies, my projects, and my contact information in one page. The website allows me to showcase some of my work in an attractive fashion to anyone interested, including potential employers as well as just the general public. The extras I used are transitions and JS plugins. I used transitions for leading into overlays for the images I used in my projects section. I also used transitions for my navbar, which disappears when scrolling down but fades in when scrolling up. For the JS plugin, I used Slick for an image carousel in my about section.
